

Complete Guide: Jailbreak & Unlock iPhone 3G firmware 2.2 using QuickPwn (For Windows)

Preparation for Jailbreak & Unlock

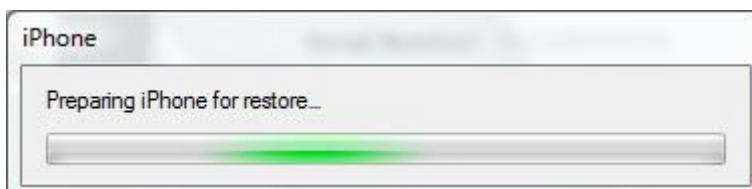

1. First, make sure you have upgraded to iTunes version 8.0 or higher and **backup** your iPhone data by synchronizing it with iTunes.
2. Download [QuickPwn 2.2.5-2](#).
3. Download firmware 2.2 for the iPhone 3G called [iPhone1,2_2.2_5G77_Restore.ipsw](#).
4. Download both [Bootloader v3.9 \(bl39.bin\)](#) and [Bootloader v4.6 \(bl46.bin\)](#).
5. You need to have [.NET Framework](#) installed to use QuickPWN 2.2.1 on Windows.
6. Save them all in the same folder and unzip QuickPwn-2.2.5-2.zip to the same place.

Installing iPhone 3G (2nd Gen) Firmware 2.2 via iTunes

7. Next, connect your iPhone to your computer via USB cable and launch iTunes. Select your iPhone in iTunes.

8. Okay, now hold the SHIFT key and click the “**Restore**” button. iTunes will launch a file dialog for you to select the firmware file. Locate the [iPhone1,2_2.2_5G77_Restore.ipsw](#) file that you have previously downloaded and click “Open”.
9. iTunes will then restore your iPhone with firmware 2.2. Keep your iPhone connected, don't touch it and wait until the process completes.

14. Next, you are required to provide the firmware 2.2 IPSW file.

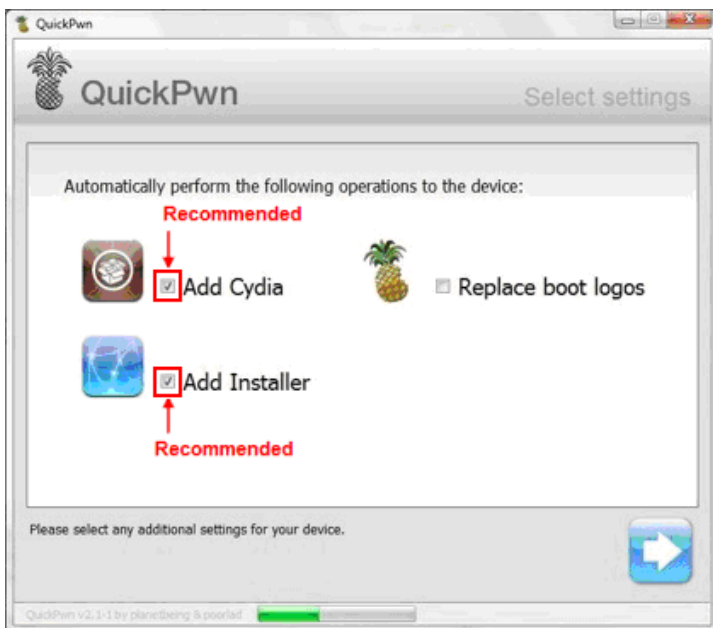

15. Click “Browse” button to locate it and select [iPhone1,2_2.2_5G77_Restore.ipsw](#).

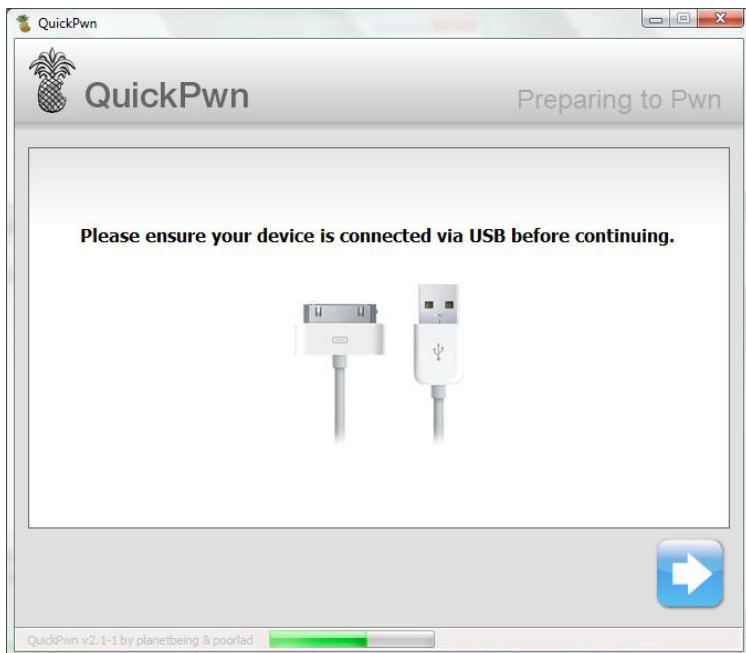

16. Click the blue arrow button to continue.

Complete Guide: Jailbreak & Unlock iPhone 3G firmware 2.2 using QuickPwn (For Windows)

17. After selecting the firmware, QuickPwn will ask you to select which installers you would like to add (Cydia & Installer) as well as replacing the boot screens. We recommend only adding **Cydia** and **Installer**. Leave **Replace boot logos** unchecked.

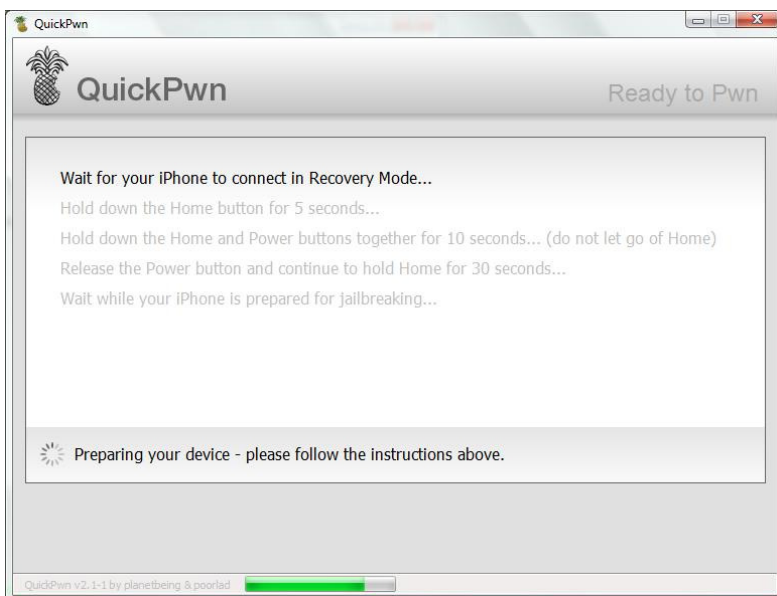

18. Click the blue arrow button to continue.
19. Your iPhone should still be connected with USB cable. QuickPwn requests you to confirm it once again as the Jailbreak process will begin. If you're ready, click blue arrow button to continue.

23. Once completed, QuickPwn will let you know the jailbreak process is successful. Your iPhone will be restarted.

Unlock your iPhone 3G using Yellowsn0w from Cydia Installer

24. On your iPhone 3G, turn on your WiFi and connect to your wireless network. This is necessary in order to connect to the software repositories in the Cydia installer.
25. Now Launch the Cydia Installer application and click "Upgrade Essential" and then restart. You will need to re-launch Cydia after the restart.

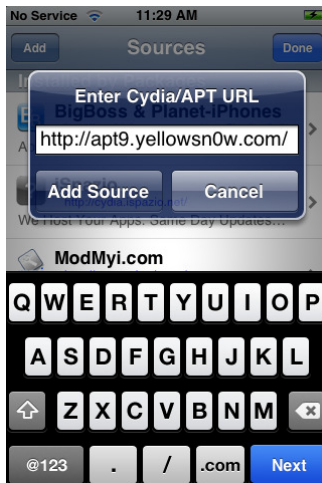

26. When prompted at the "Who Are You" screen, just choose the first option "User (Graphical Only)."

30. Now click on the "Search" tab and type "yellowsn0w" and install the app "yellowsn0w."

31. Download and install OpenSSH, BossPrefs, and BossTools using the Cydia Installer. OpenSSH is needed to connect to your iPhone using a file transfer application (WinSCP) or terminal software (Putty SSH). BossPrefs allows you to disable services, hide applications, respring your iPhone desktop, reboot, and power off.
32. For US T-Mobile users, you will need to disable the "Enable 3G" setting in your network settings.
33. Now restart your iPhone 3G with your SIM card inserted. Now try and make some calls with your newly unlocked iPhone 3G!
34. T-Mobile users will need to add the APN string in Settings -> General -> Network -> Cellular Data Network:

Service	Access Point Name (APN)
T-MobileWeb	wap.voicestream.com
T-Mobile Internet	internet2.voicestream.com
NEW T-Mobile Internet	epc.tmobile.com
T-Mobile Internet with VPN	internet3.voicestream.com
T-Mobile BlackBerry	wap.voicestream.com
T-Mobile SideKick	hktop.t-mobile.com
